Project Name	Metro Ticket Generation System Using ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement Template:

A well-articulated customer problem statement allows the team to find the ideal solution for the challenges customers face. The following problem statements are defined for the Metro Ticket Generation System project.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A daily metro commuter who travels during peak hours	Book a metro ticket quickly and reach my destination on time	I have to stand in long queues at manual ticket counters	There is no digital booking platform available and the station relies entirely on manual counters	Frustrated, stressed, and at risk of missing my train
PS-2	A metro station administrator responsible for managing passenger bookings	Track and manage all passenger booking records accurately	All records are maintained manually and are difficult to search or audit	There is no centralized digital system to store, search, or report on booking data	Overwhelmed and unable to ensure accuracy in record management
PS-3	A group traveller booking tickets for multiple passengers	Book multiple metro tickets in a single transaction for my group	Manual counters only process one ticket at a time, causing delays	The current system has no batch booking capability or digital multi-passenger support	Inconvenienced and unable to manage group travel efficiently
